XVII. Mass Airflow Sensor (MAF)

Overview:

Classroom and lab review of the

- Primary functions of the fuel cell system mass air flow sensor
- Theory of their basic operation and mechanization
- Review of sensor schematic representation both mechanical and electrical
- Faults associated with MAF
- Methodologies on testing MAF sensors off vehicle
- MAF wiring harness

Description:

The mass flow sensor in a fuel cell vehicle performs in a similar fashion to those used in internal combustion vehicles but with higher flow rates

Outcome (Goal):

Student will be able to explain the functions and operating parameters of the MAF.

Objectives:

Students shall be able to:

1. Identify a defective sensor using vehicle data and hand-held meters
2. Locate, inspect and replace the sensor
Tasks:

Students will

1. Explain the function and operating principles of mass flow sensors
2. Use vehicle pass through communication to collect data on a mass flow sensor’s operation
3. Locate, remove and replace a mass air flow sensor using OEM instructions
4. Identify MAF harness pinouts
5. Bench test a mass air flow sensor
